DETAILED ACTION
EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Reitseng Lin on 5/17/09.

The application has been amended as follows:

Claim 1. (Currently Amended) A method of selecting and reproducing of a sound document within a collection of sound documents stored in a reproduction apparatus furnished with a display device, comprising:

- storing each sound document of the collection,
- analyzing the documents stored to determine audio parameters specific to each document,
- positioning graphics identifiers corresponding to part of the sound documents on a graphics page of the display device, a position of each graphics identifier being dependent on the parameters calculated previously for a given document,
- automatically selecting and reproducing successively the sound documents according to a strategy taking into account the position of the graphics identifiers of the documents in the graphics page and a geometric characteristic specific to the reproduction apparatus, a total duration of the reproductions being equal to a sum of the durations of the selected sound documents, wherein the selection comprises automatically selecting and reproducing the

documents whose graphics identifiers are situated in proximity to a graphics symbol based on a mathematical formula having a starting point and a finishing point, a first document selected being situated on the starting point or being closest to the starting point.

Claim 5. (Currently amended) The method of selecting and reproducing of a sound document according to Claim 1 wherein ~~the selection consists of automatically selecting and reproducing the documents whose graphics identifiers are situated in proximity to the graphics symbol~~ is a straight line segment between the [[a]] starting point and the [[a]] finishing point, a first document selected being situated on the starting point or being that closest to the starting point.

Claim 6. (Currently amended) The method of selecting and reproducing a sound document according to Claim 1 wherein ~~selection consists of:~~
~~automatically selecting and reproducing documents whose graphics identifiers are situated in proximity to the graphics symbol~~ is a geometric shape consisting of a line commencing from the [[a]] starting point and ending at an edge of the screen, a first document selected being that situated on the starting point or being that closest to the starting point.

Claim 10. (Currently amended) A reproduction apparatus comprising a central unit, a means for receiving sound documents, a means for storing the documents received, a means for introducing a user command, a means for analyzing the documents stored to determine audio parameters specific to each document, wherein the means for analyzing the documents stored

comprises: a means for displaying a graphics page of graphics identifiers corresponding to part of the sound documents stored, a position of the graphics identifiers of each document being dependent on the previously calculated audio parameters, and a means for selecting sound documents for an automatic chaining of a reproduction of the selected sound documents according to a determined strategy taking into account a position of the graphics identifiers of the documents within the graphics page and a geometric characteristic specific to the reproduction apparatus, a reproduction means for chaining a reproduction of the selected documents during a total duration of the reproduction means being equal to a sum of the durations of the selected sound documents, wherein the means for selecting sound documents selects and reproduces documents whose graphics identifiers are situated in proximity to a graphics symbol based on a mathematical formula having a starting point and a finishing point, a first document selected being situated on the starting point or being closest to the starting point.

Claim 14. (Currently amended) The reproduction apparatus according to Claim 10 wherein ~~the means for selecting sound documents selects and reproduces documents whose graphics identifiers are situated in proximity to~~ the graphics symbol is a straight line segment between the [[a]] starting point and the [[a]] finishing point, a first document selected being situated on the starting point or being closest to the starting point.

Claim 15. (Currently amended) The reproduction apparatus according to Claim 10; wherein ~~the means of selecting sound documents further comprises:~~

~~selecting and reproducing documents whose graphics identifiers are situated in proximity to the graphics symbol is a geometric shape consisting of a line commencing from the [[a]] starting point and ending at an edge of a screen, a first document selected being situated on the starting point or being closest to the starting point.~~

Allowable Subject Matter

Claims 1-18 are allowed over the prior arts of record.

The following is an examiner's statement of reasons for allowance: Applicant has claimed uniquely distinct features in the instant invention which are not found in the prior art either singularly or in combination automatically selecting and reproducing successively the sound documents according to a strategy taking into account the position of the graphics identifiers of the documents in the graphics page and a geometric characteristic specific to the reproduction apparatus, a total duration of the reproductions being equal to a sum of the durations of the selected sound documents, wherein the selection comprises automatically selecting and reproducing the documents whose graphics identifiers are situated in proximity to a graphics symbol based on a mathematical formula having a starting point and a finishing point, a first document selected being situated on the starting point or being closest to the starting point. These features are not found or suggested in the prior art.

The closest prior arts Graham and Konig discloses a conventional an acoustic database Navigator for interactive analysis of acoustic archives that the multivariate features are projected in a two-dimensional display with coordinate axes; either singularly or in combination fail to anticipate or render the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
